XENON MONITOR

FM-9XE

DESCRIPTION:

The **FM-9XE Xenon** Monitor determines Xenon content of air by drawing the air through a gas chamber which is under constant surveillance by a radiation detector.

A six foot outlet and inlet hose draws air from the use area, duct, stack, glove box, hood or filter trap.

In addition to showing the Xenon content on the digital meter this monitor has a built-in data logger and USB Ports for data output.

An alarm is both visual and audio with a red flashing light and/or 2,000 Hz (beep) should the preset level be exceeded.
